

The Top 3 Stocks That Could Double in 2022

For months, we've dealt with absolute chaos in the markets.

There was the coronavirus, the geopolitical issues, inflation, fears of Fed action, depressing economic outlooks, you name it...

While we can't tell you what could happen next, we can point you in the right direction of stocks we believe could double, if not triple in 2022.

Lithium Americas (LAC)

Lithium Americas could easily see higher highs.

All thanks to a lithium bull market that shows no signs of slowing – at least not soon. For one, by 2030, 125 million electric vehicles could be on the road. Two, major automakers are starting to abandon internal combustion engines for EVs.

However, for millions of EVs to hit the roads, each will need around 22 pounds of lithium.

Unfortunately, the world is in short supply, with massive demand.

That's a strong catalyst for Lithium Americas.

Even better, construction activities at Caucharí-Olaroz remain on track to achieve first production by mid-2022 on the initial 40,000 tonnes per annum operation.

Cassava Sciences (SAVA)

Cassava Sciences could be one of the most talked about Alzheimer's stocks of 2022.

Despite all of the negativity, Cassava pushed forward with Phase III trials.

In October, the company announced it initiated a Phase 3 efficacy study of simufilam, the Company's investigational drug for patients with Alzheimer's disease, with a second Phase 3 efficacy study of simufilam in Alzheimer's disease is expected to begin by year end.

Cassava Sciences' Phase 3 efficacy studies of simufilam in Alzheimer's disease are being conducted under Special Protocol Assessments (SPA) from the U.S. Food and Drug Administration (FDA). The SPAs document that FDA has reviewed and agreed upon the key design features of Cassava Sciences' Phase 3 study protocols.

ChargePoint Holdings Inc. (CHPT)

EV charging stocks are just starting to run.

Helping, there's the \$1 trillion infrastructure bill, which allocates \$5 billion to expand EV-charging stations along highways and an additional \$2.5 billion for other charging alternatives such as hydrogen-fueling infrastructure.

Two, with EV demand still accelerating, we could see thousands of charging stations across the U.S. In fact, according to the company:

- The electrification of mobility is happening at record rates, presenting a tremendous addressable market for ChargePoint

- EVs projected to be 9.9% of new vehicles sold in 2025 and 29.2% 2030 in the U.S. and Europe (compared to 2.6% in 2019)
- Cumulative EV charging infrastructure investment in U.S. and Europe projected to be ~\$60 billion by 2030 and ~\$192B by 2040
